

# The CYPRES Maintenance:

all applicable wear and tear is taken care of

all this is checked and / or re-calibrated and / or replaced:

- = temperature stability check and adjustment
- = precision of pressure check and adjustment
- = precision of altitude check and adjustment
- = power consumption check and analysis
- = capability to fire
- = functionality of the cutter
- = shielding check and adjustment
- = waterproofness check and adjustment
- = condition of measurement technique and analysis
- = battery replacement
- = filter replacement

all applicable necessary repairs are done

all applicable hard and software is updated

all applicable improvements (discovered in the last 4 Years) are installed

all applicable adjustments to changed environmental conditions are done

to explain this point: a construction can only be done to the known circumstances at the time of the design. Years later, things can change or new things can turn up which alter the environment of the device. In case the device can not cope with the new situation, it has to be adjusted. It would be fatal, if not. During the existence of the CYPRES we already had to execute such an adjustment 2 times.

4 – year warranty extension
